EDUCATION

M.Sc. (Integrated) Software Systems	2024 – 2029
PSG College of Technology, Coimbatore	CGPA: 8.43/10
XII (Higher Secondary)	2024
The TVS School, Madurai	90.3%
X (SSLC)	2022
The TVS School, Madurai	88.8%

EXPERIENCE

Backend Engineering Intern EWhizard proleap.ewhizard.tech	Mar 2026 – Aug 2026
- Consolidated 4 transaction-parsing services into a single APScheduler-based worker, cutting the deployed stack from 9 to 5 containers (44% fewer). - Remediated a cross-user data-isolation vulnerability in an LLM-generated SQL query pipeline across 2 production endpoints. - Developed a frontend MCP server with 6 tools for Figma-to-code conversion, covering design retrieval, token sync, and component generation.	

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL, JavaScript
Frameworks: Spring Boot, FastAPI, Flask, Node.js, Express.js, React.js
Databases: MySQL, PostgreSQL, MongoDB, Redis
Tools: Docker, Git, GitHub Actions, CI/CD, Postman

PROJECTS

ArthaDhruva github.com/hemanthvnp/ArthaDhruva	Aug 2026 – Oct 2026
- Built a multi-tenant credit risk platform for mortgage lenders in Spring Boot and PostgreSQL that scores loan default risk and projects portfolio losses, enforcing tenant isolation with Row Level Security and passing 150 tests. - Made parallel Monte Carlo simulations reproducible on any thread count by seeding each scenario independently, and traced tail losses to loans by replaying seeds instead of storing scenarios. - Segmented the Docker network into public and private tiers, exposing only Caddy (automatic TLS) and isolating the databases on an internal network, while blocking SSRF on tenant webhooks and container access to the cloud metadata endpoint.	
Throttlr github.com/hemanthvnp/Throttlr	Mar 2026 – Jun 2026
- Engineered an API gateway that sits in front of backend services, handling security (TLS, JWT), traffic control (rate limiting), and automatic failover between backend servers. - Enabled live config reload with no cold start or dropped connections, letting rate limits and routing rules update without a restart. - Sustained 28,548 req/s in benchmarks with P50 647μs, P99 2.82ms, and zero failures across 857K requests.	
CineScope github.com/hemanthvnp/CineScope	Feb 2026 – Apr 2026
- Built an LLM-powered movie search (Groq via LiteLLM) that plans parallel TMDB and ML calls and enforces extracted filters on results. - Added circuit breakers, two-tier caching and LLM-failure fallbacks, cutting repeat searches from about 2 s to under 5 ms. - Containerized 5 microservices with Docker and automated Render deployment through GitHub Actions, gating every release on 83 tests.	

EXTRACURRICULAR ACTIVITIES

- CSA Tech Team:** Deputy Coordinator, Computational Sciences Association, PSGCT.
- FinVerse:** Member, PSGCT finance club.
